

IILM UNIVERSITY

DELOITTE DATA ANALYTICS & FORENSIC TECHNOLOGY INTERNSHIP

 **JOB SIMULATION PROJECT PRESENTATION**

STUDENT NAME

Rahul Sharma

ENROLLMENT NUMBER

25SCS1003001264

PROGRAM & SEMESTER

B.Tech. AIML | 3rd Semester

HOST ORGANIZATION

Deloitte Australia (via Forage)

ROLE TRACK

Data Analytics & Forensics

COMPLETION MONTH

August 2026

Executive Overview & Objectives

Job Role & Context

- **Role Description:** Acted as a Junior Data Analyst in Deloitte Australia's Technology Consulting practice.
- **Industry Domain:** Industrial IoT telemetry diagnostics, business intelligence, and forensic workplace analytics.
- **Simulated Client:** Daikibo Corporation — a multi-national manufacturer operating automated global smart factories.
- **Core Mission:** Transform disparate operational data into executive decision models and regulatory equity reports.

Core Project Objectives

- **IoT Telemetry Modeling:** Ingest and synthesize 1-month JSON telemetry spanning 4 global factory locations.
- **Failure Root-Cause Analysis:** Isolate equipment breakdown frequency by factory and machinery category.
- **Forensic Compensation Audit:** Evaluate enterprise pay parity indices and construct a 3-tier classification engine in Excel.
- **Executive Synthesis:** Deliver structured Tableau dashboards and compliance datasets to client leadership.

Task 1: Factory Telemetry **Analytics**

-  **Client Scope:** Evaluated operational telemetry across Daikibo's 4 global sites: Tokyo (Meiyo), Osaka (Seiko), Berlin, and Shenzhen.
-  **Data Pipeline:** Processed high-frequency JSON telemetry from 9 distinct heavy machinery types reporting every 10 minutes.
-  **Tableau Visual Dashboard:** Designed interactive comparative bar charts and breakdown matrix to isolate peak failure zones.
-  **Key Analytical Outcome:** Identified specific factory nodes experiencing disproportionate downtime and ranked vulnerable machine types.

Task 2: Forensic Pay Equity Audit

-  **Forensic Investigation:** Investigated employee compensation fairness across factories and distinct job profiles using forensic audit practices.
-  **Equality Metric Range:** Evaluated raw Equality Scores ranging from -100 to +100 (where 0 denotes ideal pay parity).
-  **Excel Classification Engine:** Built nested logical condition formulas to categorize scores into: **Fair (± 10)**, **Unfair**, and **Highly Discriminative (< -20 / > 20)**.
-  **Deliverable:** Generated the updated **Equality Table.xlsx** data model ready for governance review.

Technology Stack & Methodologies

Tableau Software

Engineered interactive BI dashboards, multi-dimensional filters, downtime aggregation matrices, and factory breakdown visual comparisons.

Microsoft Excel

Applied advanced nested logical functions (IF, IFS, AND), statistical indexing, data hygiene rules, and categorical equality stratification.

Forensic Analytics

Utilized forensic hypothesis testing, anomaly detection in workforce payroll distributions, and audit-trail governance frameworks.

Simulation Deliverables & Impact

DOMAIN TRACK	APPLIED TOOL	PROBLEM SOLVED	DELIVERABLE & OUTPUT	IMPACT LEVEL
Data Analysis	Tableau Desktop	Pinpointing failure-prone machinery across 4 international smart plants	Interactive Telemetry Dashboard & Breakdown Heatmap	High Operational Impact
Forensic Tech	Microsoft Excel	Categorizing disparate compensation scales and bias variance	Automated 3-Tier Classification Model (Equality Table)	Governance & Compliance
Consulting Insights	Business Analysis	Synthesizing raw technical data into executive action points	Deloitte Practical Simulation Completion Portfolio	Client Strategic Value

Questions & Discussion

Thank you for your time and attention.

 **Certificate of Completion Verified by Deloitte Australia**

Issued to: **Rahul Sharma** | Enrollment No: **25SCS1003001264** | Institution: **IILM University**
Verification Authority: Tina McCreery (Chief Human Resources Officer, Deloitte) | Forage Credential
